Owner's Handbook

JJ MONAGHAN

About JJ Monaghan

I'm a young lad from a council estate in Scotland. In 2017, I took my passion for watches and an entrepreneur's drive to start something on my own.

The past 7 years has been full of ups and downs as with every business journey. Some personal highlights include having Martin Compston wear my watch on the BBC drama The Nest, to being invited to the Scotland National Team's hotel to fit some of the players and staff with watches, selling out of my debut Scotland collection and now releasing our first automatic watch.

Thank you for being part of this journey.

Jason Monaghan

Heritage Collection

The Heritage collection is a symbol of unparalleled luxury and engineering excellence. With its sleek, classic design and polished finish, this timepiece is crafted by skilled watch makers to meet the highest standards of quality. The robust stainless steel case ensures water resistance up to 100 meters, while the self-winding NH35 movement guarantees precise timekeeping. The Heritage bracelet combines comfort and durability with a sophisticated aesthetic, making it a perfect accessory for any occasion.

The textured dial design is inspired by the North sea with its strong currents surrounding the unique shape of Scottish coastline.

Owning a Heritage is more than owning a watch; it's possessing a piece of our history and an investment. Elevate your style with the Heritage, where timeless design meets exceptional performance, and experience the legacy of JJ Monaghan on your wrist.

Features

- 41-hour power reserve
- Date calendar
- Sapphire crystal
- Wave textured dial
- Brushed steel case with polished bezel
- Swiss Super-LumiNova® BGW9 hands and indexes
- 10ATM Water resistant
- Central hacking seconds
- Acid engraved screw-in crown
- Self-winding mechanical movement
- Open caseback
- Anti-shock system

Specifications

Model	Heritage
Case size	41mm
Case	316L Stainless steel
Weight	160 - 190g
Movement	Seiko NH35A
Water resistance	10ATM

Setting the time and date

For a superior water resistance, your crown is of the screw-in type. The crown should sit flush to the case position 1 in order to maintain water resistance.

- First unscrew the crown anti-clockwise from the case to position 2 for winding in power. Wind in a clockwise direction to re-power the watch. Your Heritage watch has a maximum power reserve of 41 hours when fully wound. Normal wearing will allow the rotor to start re-powering the watch over time after putting on your wrist. After a period of non-use we recommend that you manually wind the watch at least 20 times to ensure there is sufficient power in the watch before the rotor maintains the power.

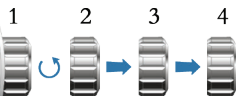

- Pull gently into position 3. For rapid date correction, turn in an anti-clockwise direction.
- Pull gently into position 4. This position is used for handsetting and stopping of the seconds hand. For precise time setting it is recommended to pass beyond the desired minute and to set the hand backwards.

PLEASE NOTE

Date correction should not be carried out between 20.00 hr and 02.00 hr as the watch gearing will already be aligning itself to change the date. The crown should always be pushed in after adjustment, and it is best to do so from position 3 to avoid advancing beyond the desired date. You must always ensure the crown is fully tightened before any use in water.

Unscrew and then pull

1. Screw-in position
2. Manual winding
3. Date setting
4. Time setting
