

The
ORTIGIA
Watch Manual

The Story

In the summer of 2024, I had just got married and was on honeymoon in Ortigia, Sicily.

Somehow, I had managed to forget to pack any of my own watches, so my wrist felt strangely empty as we wandered through the old streets...

Down one of the side streets, I came across a small vintage bazaar. In the window was one of the most striking watches I had ever seen. I went inside and, with the help of Google Translate, managed to speak with the shopkeeper, agree on a price, and buy it.

The dial carried a brand name I had never heard of before. After months of searching, I still couldn't find much more about it, other than that the piece is believed to date back to the 1960s.

The Story Continued

This watch became the inspiration for our latest release: an homage to a beautiful Continental design, discovered by chance on the streets of Sicily.

Thank you for your purchase.

How To Set Your Watch

Normal Position

How To Set Your Watch

Pos. A Position of rest (watch running)

Pos. B Quick-change correction for date

The date can also be corrected during the day-changing phase between 10 pm and midnight. The date of the following day has to be set, because no automatic date change takes place at midnight.

- Pull the crown out to position B (watch still running).
- Turn the crown clockwise until the required date appears.

Pos. C Setting the time

- Pull the crown out to position C (watch stopped).
- Turn the crown, until the current time is displayed (remember the 24-hour cycle).
- Push the crown back into position A.

Your watch is only water resistant when the crown is in the normal position.
